

Changxin Shi

5105423383 | cxshi@berkeley.edu | Berkeley, CA | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data scientist and product DS candidate with 1+ years applying machine learning, statistical modeling, experimentation, and causal inference across healthcare, social media, finance, operations, and academic services. UC Berkeley MS Analytics candidate (GPA 4.0) skilled in Python, SQL, Scikit-learn, XGBoost, PySpark, and Databricks.

EDUCATION

University of California-Berkeley, USA

Aug 2025 - Aug 2026

Master of Science in Analytics (All course work completed by May 2026), GPA 4.00/4.00

Kean University, USA

Aug 2021 - May 2025

Bachelor of Science in Finance (Minoring Economics & Math), GPA 3.90/4.00

SKILLS

- **Programming & Data:** Python (Pandas, NumPy, Scikit-learn, PyTorch, SciPy), SQL, PySpark, R, Git
- **Machine Learning & Statistics:** Feature Engineering, XGBoost, Random Forest, Time Series, Causal Inference, A/B Testing, LLM
- **Platforms:** Databricks, Tableau, Power BI, AWS, Snowflake

PROFESSIONAL EXPERIENCE

Gala Circle Inc. San Jose, CA

May 2026 - Present

Data Analyst Intern

- Validated operational and financial metrics across 30+ restaurant merchants, creating analysis-ready datasets for segmentation.
- Engineered merchant-level features from revenue, order, service, and conversion signals for downstream segmentation.
- Clustered merchants into 3-5 tiers by scale, operations, and service needs for targeted strategy.
- Triangulated structured data with 10+ merchant interviews to identify demand drivers, bottlenecks, and growth opportunities.
- Quantified outreach and conversion patterns across 50+ partner and merchant records to identify performance drivers.

University of California-Berkeley

Jan 2026 - Present

Data Analyst

- Automated integration of circulation, digital access, and space utilization datasets using Python and SQL.
- Diagnosed demand trends, peak activity periods, and department-level usage patterns through exploratory analysis.
- Delivered Tableau dashboard tracking 10+ KPIs across 12 branches, reducing stakeholder reporting time by 30%.
- Translated analytical findings into actionable recommendations for service optimization and strategic planning.

Xiaochuan Technology

June 2025 - Aug 2025

Operation Analyst Intern

- Applied MySQL and clustering to segment 10,000+ posts across tags, comment types, and engagement metrics for downstream classification data.
- Ran recommendation experiments, lifting top comments 22%, daily UGC comments 2,000+, and comment rate 7.3%.
- Converted engagement and clustering outputs into Tableau dashboards for product and engineering stakeholders.
- Partnered with product and engineering teams to deploy scalable recommendation optimizations in production.

Dongxing Securities

May 2024 - Aug 2024

Data Analyst Intern

- Engineered 6+ composite factors in Python from financial data to support CSI 500 multi-factor strategy research.
- Built Random Forest, LASSO, and ARIMA models for backtesting classification, regression, and time-series forecasting strategies.
- Improved model performance by +1.52% annualized alpha, +0.09 IR, and -1.05% relative drawdown through statistical modeling.
- Collaborated with traders and strategists to gather requirements, explore feasible factors, and refine data-driven investment strategy.

Industrial and Commercial Bank of China

Nov 2023 - Jan 2024

Data Analyst Intern

- Extracted and transformed transaction and market data with SQL for portfolio analysis across 15+ client accounts.
- Performed return attribution and volatility analysis to identify allocation inefficiencies, improving risk-adjusted return by 2.3%.
- Built data validation processes and reporting templates, reducing reporting discrepancies by 20%.
- Built Excel-based tracking worksheets and portfolio reports with visualization components for client monitoring.

IQVIA Solutions Enterprise

Jun 2023 - Aug 2023

Management Consultant Intern

- Modeled China's HPV vaccine market across 12 cities by integrating provider distribution, consumer demographics, and pricing data.
- Built SQL ETL and analysis workflows with statistical modeling and insights from 20+ physicians and 10+ pharma leaders.
- Designed 5+ interview guides, translating qualitative inputs into market-sizing and model assumptions.
- Created Tableau-backed deliverables supporting a pharma IPO strategy and executive decision-making.

PROJECTS

Product Experimentation & Causal Impact ([GitHub](#) | [Demo](#))

Sep 2025 – Mar 2026

- Built an experimentation and causal inference platform to evaluate product launches across 8K users, 784K events, and 16.8K marketplace orders.
- Compared A/B testing, propensity score matching, and difference-in-differences methods to estimate conversion, revenue, and marketplace impact.
- Measured an 11.8pp conversion lift and \$19.10 revenue impact, translating statistical results into launch recommendations and risk flags.
- Trained conversion and uplift models with SHAP-based feature explanations, and threshold-value analysis to prioritize high-impact user segments.
- Added post-launch diagnostics for review quality, delivery delay, revenue movement, and feature drift to support ongoing product monitoring.

AI Customer Intelligence & Campaign ROI Platform ([GitHub](#) | [Demo](#))

Jan 2025 – Aug 2025

- Built Python/DuckDB/Streamlit app for ecommerce segmentation, repeat-purchase prediction, explainability, and retention actions.
- Implemented DuckDB SQL layer for RFM/lifecycle cohorts, campaign holdout analysis, and reusable KPI tables.
- Shipped CSV upload workflow and model-score summaries so reviewers can test the app with custom customer data.
- Benchmarked 3 models (best RF, 0.709 ROC-AUC) and linked 7.2pp campaign lift to \$2.0K net profit and 115.7% ROI.
